#### What is JULUCA?

JULUCA is a prescription medicine that is used without other antiretroviral medicines to treat Human Immunodeficiency Virus-1 (HIV-1) infection in adults to replace their current anti-HIV-1 medicines when their healthcare provider determines that they meet certain requirements.

HIV-1 is the virus that causes Acquired Immune Deficiency Syndrome (AIDS). It is not known if JULUCA is safe and effective in children.

#### IMPORTANT SAFETY INFORMATION

##### Do not take JULUCA if you:

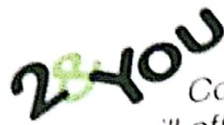

- have ever had an allergic reaction to a medicine that contains dolutegravir or rilpivirine.

Please see Important Safety Information throughout this brochure.

Please see Important Facts about JULUCA.

Speakers will vary per event.  
Real patients living with HIV  
compensated for their time by  
ViV Healthcare.

You've come far in your HIV treatment. Come to this info-packed event where guest speakers will offer a fresh perspective on HIV treatment.

### Learn about a treatment option

A healthcare professional will talk about JULUCA, a prescription HIV-1 complete treatment for people who have been undetectable\* for at least six months. Discover what's different about this treatment option.

### Get inspired from people living with HIV

Hear others share their personal experiences about living with HIV, overcoming obstacles, and partnering with their healthcare team to achieve the best care.

### Join a Q&A session

Connect with people living with HIV in your community by taking part in a live, moderated question-and-answer session.

\*Undetectable means keeping the amount of HIV-1 in the blood at very low levels (less than 50 copies per mL).

Sign up is easy—  
no personal  
information needed.
