Study Information

Purpose: To investigate the relationship between drug abuse, infection, and liver function over time.

Activities: Blood draw, urine toxicology test, study questionnaires. Eligible participants will receive a Magnetic Resonance Electrography (MRE) scan.

Duration: Participants will be asked to attend the study visits every 6 months for 4 years.

Compensation: We offer \$25-\$50 in acknowledgment and appreciation for your participation.

This is an observational study. Treatment is not provided
