Technical Notes

- HIV diagnoses by year of diagnosis represent persons whose HIV was diagnosed in that year, regardless of AIDS status at time of diagnosis.

- AIDS and HIV diagnoses by year of diagnosis are not mutually exclusive and cannot be added together.

- HIV prevalence data represent persons who were living with an HIV diagnosis in the reporting area through the end of the calendar year (regardless of where they were diagnosed).

- Resident deaths due to HIV represent persons who resided in Florida and whose underlying cause of death was HIV, regardless if their HIV status was reported in Florida or not.
Technical Notes, Continued

Adult diagnoses represent ages 13 and older; pediatric diagnoses are those under the age of 13.

- For data by year of diagnosis, the age is by age at diagnosis.
- For living data, the age is by current age at the end of the most recent calendar year, regardless of age at diagnosis.

 Unless otherwise noted, Whites are non-Hispanic, Blacks are non-Hispanic and Other (which may be omitted in some graphs due to small numbers) represents Asian, American Indian, or mixed races.

For data by year, area and county data will exclude Department of Corrections diagnoses. For living data, Department of Corrections will not be excluded from area and county data.
Florida’s Plan to Eliminate HIV Transmission and Reduce HIV-related Deaths

- Implement routine HIV and Sexually Transmitted Infections (STIs) screening in health care settings and priority testing in non-health care settings

- Provide rapid access to treatment and ensure retention in care (Test and Treat)

- Improve and promote access to antiretroviral pre-exposure prophylaxis (PrEP) and non-occupational post-exposure prophylaxis (nPEP)

- Increase HIV awareness and community response through outreach, engagement, and messaging
Definitions of Mode of Exposure Categories

**MSM:** Men who have sex with men or male-to-male sexual contact. The term MSM indicates a behavior that allows for HIV transmission, it does not indicate how individuals self-identify in terms of sexuality or gender

**IDU:** Injection drug use

**MSM/IDU:** Men who have sex with men or male-to-male sexual contact & injection drug use

**Heterosexual:** Heterosexual contact with person with HIV or known HIV risk

**Other Risk:** includes hemophilia, transfusion, perinatal and other pediatric risks and other confirmed risks

HIV Care Continuum Definitions

- **HIV Diagnosed**: The number of persons known to be diagnosed and living in Florida with HIV (PLWH) at the end of 2017, from data as of 6/30/2018
- **Ever in Care**: PLWH with at least one documented Viral Load (VL) or CD4 lab, medical visit, or prescription from HIV diagnosis through 3/31/2018
- **Currently in Care**: PLWH with at least one documented VL or CD4 lab, medical visit, or prescription from 1/1/2017 through 3/31/2018
- **Retained in Care**: PLWH with two or more documented VL or CD4 labs, medical visits, or prescriptions at least three months apart from 1/1/2017 through 6/30/2018
- **Suppressed Viral Load**: PLWH with a suppressed VL (<200 copies/mL) on the last VL from 1/1/2017 through 3/31/2018
Persons Living with HIV (PLWH) in Miami-Dade County along the HIV Care Continuum in 2017
