

VACCINE SCHEDULE:

PERSONS WITHOUT HIV

1 dose of MenACWY conjugate vaccine.

PERSONS WITH HIV

2-dose primary series of MenACWY conjugate vaccine.

PERSONS AT CONTINUED RISK

If your last MenACWY conjugate vaccine was 5 or more years ago, you should have a booster dose.

MENINGOCOCCAL DISEASE CAN:

Cause severe infections of the brain's lining, the spinal cord or the bloodstream.

Spread through respiratory and throat secretions like spit, and by living in close quarters, kissing, sexual contact, etc.

Cause sudden fever, headache, stiff neck or flu-like symptoms—often with nausea, vomiting, increased sensitivity to light, rash and confusion.

**QUICK MEDICAL
ATTENTION IS EXTREMELY
IMPORTANT.**
