

# RPM

## Remote Patient Monitoring Through EHE/HealthTec.

### About RPM

Remote Patient Monitoring (RPM) enables clinicians to closely monitor patients' health conditions from a distance. The program target has expanded to include not only a range of conditions, including hypertension, diabetes, and individuals with a body mass index (BMI) greater than 30 but also those living with HIV who may benefit from additional support to achieve viral suppression and best health outcomes.

### Questions

To discuss eligibility or enrolling into the Care Resource RPM program, please call John Sheridan, Registered Nurse Special Projects Coordinator 305-576-1234 x 203
