

# Miami-Dade County Ryan White Program Minimum Primary Medical Care Standards

**Statement of Intent:** All local Ryan White Program—funded practitioners are required by contract to adhere, at a minimum, to the Public Health Service (PHS) Guidelines. These standards serve as the minimum standards by which practitioners will be measured.

## I. Requirements

### Requirements for New Practitioners (Physicians, Advanced Practice Registered Nurse, and Physician Assistants/Associates):

- New practitioners should be linked to existing Ryan White Program providers, AIDS Education and Training Center (AETC) or through an American Academy of HIV Medicine (AAHIVM) specialist to support the new provider.
- New providers will receive a chart review within 6 months by supervising physician, medical director or agency team.
- When a new practitioner is working with a contracted practitioner, new practitioner is encouraged to comply within one year to complete at least 30 hours of HIV-related Continuing Medical Education (CME) Category 1 credits.

### Requirements for All Practitioners (Physicians, Advanced Practice Registered Nurse, and Physician Assistants/Associates):

- Practitioners are strongly encouraged to complete at least 30 hours of HIV-related Continuing Medical Education (CME) Category 1 credits within a period of two years.

#### **Practitioner must:**

- Be a Physician (MD or DO), Advanced Practice Registered Nurse, or Physician Assistant/Associates with current and valid license to practice medicine within the State of Florida.
- Have a minimum experience treating 20 HIV+ clients over the past two years or currently working and under supervision of a practitioner meeting these qualifications.
- Treat and monitor patients in adherence with current DHHS Guidelines and other standards of care, to include, but not limited to:
  - a. **American College of Cardiology/American Heart Association Guideline on the Treatment of Blood Cholesterol**  
<https://www.ahajournals.org/doi/10.1161/CIR.0000000000000625>
  - b. **Adult Immunization Schedule**  
<https://www.cdc.gov/vaccines/schedules/hcp/imz/adult.html>
  - c. **American Association for the Study of Liver Diseases**  
<https://www.aasld.org/practice-guidelines>
  - d. **American Cancer Society Guidelines for the Early Detection of Cancer**  
<https://www.cancer.org/healthy/find-cancer-early/american-cancer-society-guidelines-for-the-early-detection-of-cancer.html>
  - e. **American Medical Association Telehealth Quick Guide**

- f. <https://www.ama-assn.org/practice-management/digital/ama-telehealth-quick-guide>
  - f. **Department of Health and Human Services (DHHS) Clinical Guidelines**

  - g. **Hepatitis (HEP) Drug Interactions University of Liverpool**  
<https://www.hep-druginteractions.org/>
  - h. **HIV Drug Interactions University of Liverpool**  
<https://hiv-druginteractions.org/>
  - i. **HIV Prevention with Adults and Adolescents with HIV in the US**  
<https://www.cdc.gov/hiv/guidelines/recommendations/personswithhiv.html>
  - j. **Health Resources and Service Administration (HRSA) HIV Care for People Aging with HIV**  
<https://ryanwhite.hrsa.gov/sites/default/files/ryanwhite/grants/aging-guide-new-elements.pdf>  
<https://ryanwhite.hrsa.gov/sites/default/files/ryanwhite/grants/aging-guide-best-team.pdf>
  - k. **Infectious Disease Society of America Primary Care Guidance for Persons with HIV**  
<https://www.idsociety.org/practice-guideline/primary-care-management-of-people-with-hiv/>
  - l. **Miami—Dade County Ryan White Program (including Telehealth Policy and Test and Treat/Rapid Access [TTRA] program)**  
[https://www.miamidade.gov/global/service.page?Mduid\\_service=ser1482944607068715](https://www.miamidade.gov/global/service.page?Mduid_service=ser1482944607068715)
  - n. **National HIV Curriculum**  
<https://www.hiv.uw.edu/alternate>
  - o. **PrEP, nPEP and PEP guidelines below (Although not paid for by the Ryan White Program):**  
<https://www.cdc.gov/hiv/pdf/risk/prep/cdc-hiv-prep-guidelines-2021.pdf>  
<https://www.cdc.gov/hiv/clinicians/materials/prevention.html><https://www.cdc.gov/hiv/pdf/programpresources/cdc-hiv-npep-guidelines.pdf>
  - q. **United States (US) Preventive Taskforce**  
<https://uspreventiveservicestaskforce.org/uspstf/home>
- Follow an action plan to address any areas for performance improvement that are identified during quality assurance reviews.

## II. Assessments and Referrals

1. **Annual** – At each annual visit:
  - a. Adherence to medications
  - b. Age-appropriate cancer screening
  - c. Behavioral risk reduction
  - d. Gynecological exam per guidance for females
  - e. Interval changes in vital signs addressed, especially trend in weight/BMI over time
  - f. Mental health and substance abuse assessment
  - g. Physical examination, including review of systems
  - h. Preconception counseling for men and women

- i. Rectal examination
- j. Safer sex practices – discussions may include PrEP, PEP, nPEP, for sexual partners and should include condom usage
- k. Sexually transmitted infection assessment
- l. Update comprehensive initial history, as appropriate
- m. Vital signs, including weight, BMI, height (no shoes)
- n. Wellness exam for females

**Assess and document health education on:**

- o. Advance Directives (completion or review)
- p. Birth control
- q. Domestic violence
- r. Drugs/Alcohol/Tobacco (including smokeless) assessment/care
- s. Exercise
- t. Frailty screening, as appropriate
- u. Mental Health assessment (particularly clinical depression, care, mood, libido, sleep patterns, concentration, and memory)
- v. Neurology and/or neuropsychology referral for assessment of neurocognitive disorders, dementia, and focal neuropathies, as appropriate
- w. Nutritional assessment/care (including appetite), as appropriate
- x. Oral health care

**2. Additional Charting/Documentation at least annually:**

- a. Allergies list complete and up to date
- b. Immunization list complete and up to date
- c. Medications list complete with start and stop dates, dosages
- d. Problem list complete and up to date

**Item to be covered by subrecipient staff:** If a client knows of others who need PrEP or Test and Treat / Rapid Access, information and referral are offered.

**3. Initial – At initial visit:**

- a. Access to stable housing, food, and transportation
- b. Adherence to medications
- c. Age-appropriate cancer screening
- d. Behavioral risk reduction
- e. Comprehensive initial history
- f. Dates of last: mammogram, bone density, colonoscopy, abnormal aortic aneurysm screening, dental visit, and dilated eye exam
- g. Education that they should never run out of ART medications and need to call the FDOH—MDC clinic if they cannot obtain ART
- h. Gynecological exam per guidance for females
- i. If enrolled as Test and Treat/Rapid Access (TTRA) client (patient), follow TTRA protocol for visit
- j. Mental health and substance abuse assessment
- k. Physical examination, including review of systems

- l. Pregnancy Planning:
  - 1) Preconception counseling for men and women
  - 2) Contraceptive counseling for men and women including assessment and type of birth control method
- m. Rectal examination
- n. Safer sex practices — discussions may include PrEP, PEP, nPEP for sexual partners and should include condom usage
- o. Sexually transmitted infection assessment as appropriate including at a minimum GC, Chlamydia at anatomical sites of potential exposure, RPR, and for females trichomoniasis NAAT of vaginal secretions.
- p. Social supports and disclosure history
- q. Targeted initial history and physical examination with expectation that a complete history and physical examination will be completed within 3 months.
- r. Vital signs, including weight, BMI, height (no shoes)
- s. Wellness exam for females

**Item to be covered by subrecipient staff:** Documented HIV education, including transmission, reduction of morbidity/mortality with ART; resistance; compliance with ART and office visits and lab monitoring; life expectancy; divulging HIV status and state statute.

4. **Interim Monitoring and Problem-Oriented visits** – At every visit:
  - a. Adherence to medications and lab and office visits for monitoring
  - b. In women of childbearing age, assessment of adequate contraception
  - c. Interval changes in vital signs addressed, especially trend in weight over time
  - d. Interval risk for acquiring STD and screening as indicated
  - e. Physical examination related to specific problem, as appropriate
  - f. Risk reduction
  - g. Safer sex practices – discussions may include PrEP, PEP, nPEP for sexual partners and should include condom usage
  - h. Vital signs, including weight/BMI – may not occur every time with telehealth

#### 5. **Telehealth**

Telehealth may be used in place or conjunction with an office visit. Necessary assessments will be conducted as needed and follow-ups will be scheduled, as appropriate.

### III. Assessments at Incremental Visits

#### General Health including Labs

- 1. ALT, AST, Total Bilirubin<sup>i</sup>** – Entry into care; ART initiation or modification; 4-8 weeks after ART initiation or modification; every 6 months; or if ART initiation is delayed, every 6-12 months; or if clinically indicated.
- 2. Annual wellness visit (females)<sup>iv</sup>** – Should include screenings for anxiety, breast cancer, cervical cancer, interpersonal and domestic violence, obesity prevention (midlife women), sexually transmitted infections, urinary incontinence, and contraception. For those who are pregnant, lactation support and screenings for diabetes mellitus (including post-pregnancy), as applicable.
- 3. Basic metabolic panel<sup>i</sup>** – Entry into care; ART initiation or modification; 4-8 weeks after ART initiation or modification; every 6 months; if ART initiation is delayed, every 6-12 months; or if clinically indicated. Serum Na, K, HCO<sub>3</sub>, Cl, BUN, creatinine, glucose, and creatine-based estimated glomerular filtration rate. Serum phosphorus should be monitored in patients with chronic kidney disease who are on tenofovir disoproxil fumarate (TDF)-containing regimens. Consult the HIV Medicine Association of the Infectious Diseases Society of America's (HIVMA/IDSA) [Clinical Practice Guidelines for the Management of Chronic Kidney Disease in Patients Infected with HIV](#) for recommendations on managing patients with renal diseases. More frequent monitoring may be indicated for patients with evidence of kidney diseases (e.g., proteinuria, decreased glomerular dysfunction) or increased risk of renal insufficiency (e.g., patients with diabetes, hypertension).
- 4. Bone Densitometry<sup>iii</sup>** – Baseline bone DEXA should be performed in all greater than or equal to 50 years old postmenopausal women and men.
- 5. CBC w/ differential<sup>i</sup>** – Entry into care; ART initiation or modification; every 3-12 months if monitoring CD4 count (if required by lab); or when clinically indicated. CBC with differential should be done when a CD4 count is performed. When CD4 count is no longer being monitored, the recommended frequency of CBC with differential is once a year. More frequent monitoring may be indicated for persons receiving medications that potentially cause cytopenia [e.g., trimethoprim-sulfamethoxazole (TMP-SMX)].
- 6. Colon and Rectal Cancer Screening<sup>v</sup>** – Colorectal cancer screening recommended for individuals between 45-75 years of age. For ages 76-85 screening should be based on personal preference, life expectancy, overall health, and prior screening history. Those over 85 years old should no longer get colorectal cancer screening. Discussion should take place earlier (1) for those with a personal history of colorectal cancer or certain types of polyps, (2) for those with a family history of colorectal cancer, (3) for those with inflammatory bowel disease (ulcerative colitis or Crohn's disease), (4) for those with confirmed or suspected hereditary colorectal cancers syndrome, such as familial adenomatous polyposis (FAP) or Lynch syndrome (hereditary non-polyposis colon cancer or HNPCC), or for those for with a

personal history of getting radiation to the abdomen (belly) or pelvic area to treat a prior cancer.

7. **Glucose (Random or Fasting)**<sup>i</sup> – Entry into care; ART initiation or modification; treatment failure; or if clinically indicated. If random glucose is abnormal, fasting glucose should be obtained. HbA1C is no longer recommended for diagnosis of diabetes in person with HIV on ART, see [American Diabetes Association Guidelines](#).
8. **Gynecological Exam**<sup>vi</sup> (females) – In women and adolescents with HIV, initiation of cervical cancer screening with cytology alone should begin within one year of onset of sexual activity, or if already sexually active, within the first year after HIV diagnosis but no later than 21 years of age. Cervical cancer screenings in women who are infected with HIV should continue throughout a woman’s lifetime (i.e., not stopping at age 65 years). In women infected with HIV who are younger than 30 years, if the initial cytology screening result is normal, the next cytology screening should be in 12 months. If the results of three consecutive annual cervical cytology screenings are normal, follow-up cervical cytology screening should be every 3 years. Co-testing (cervical cytology and human papillomavirus [HPV] screening) is not recommended for HIV-infected women younger than 30 years. Women infected with HIV who are 30 years and older can be screened with cytology alone or co-testing. After women screened with cytology alone have had three consecutive annual test results that are normal, follow-up screening can be every 3 years. Women infected with HIV who have one negative co-test results (normal cytology and HPV negative) can have their next cervical cancer screening in 3 years. In women with HIV infection, co-testing results that are cytology negative, but HPV positive are managed as in the general population. Women with HIV who have cervical cytology results of low-grade squamous intraepithelial lesions or worse should be referred for colposcopy. For women with HIV infection who are 21 years or older and have atypical squamous cells of undetermined significance (ASC-US) test results, if reflex HPV testing results are positive, referral to colposcopy is recommended. If HPV testing is not available, repeat cervical cytology in 6-12 months is recommended, and for any result of ASC-US or worse on repeat cytology, referral to colposcopy is recommended. Repeat cytology in 6-12 months, but not HPV testing, is recommended for HIV-infected women younger than 21 years with ASC-US test results. Although not explicitly stated in the Panel guidelines, women with HIV infection who have ASC-US, HPV-negative results (whether from reflex HPV testing or co-testing) can return to regular screening.
9. **Hepatitis A Screening**<sup>ii</sup> – At initial screening, if non-immune, offer vaccination and after vaccination received do postvaccination serologic testing 1 or 2 months or at the next scheduled visit. After the second vaccine to assess for immunogenicity. A repeat vaccine series is recommended in those who remain seronegative.
10. **Hepatitis B Serology (HBsAb, HBsAg, HBcAb total)**<sup>i</sup> – At entry into care; at ART initiation or modification, in patients not immune to hepatitis B (HBV), consider retesting if switching to a regimen that does not contain tenofovir disoproxil fumarate (TDF) or tenofovir alafenamide (TAF); as clinically indicated including before starting hepatitis C direct-acting antiviral (HCV DAA). If patient has HBV infection (as determined by a positive HBsAg or HBV DNA test result), TDF or TAF plus either emtricitabine (FTC) or lamivudine (3TC) should be used as

part other ART regimen to treat both HBV and HIV infections. If HBsAg, HBsAb, and HBcAb test results are negative, hepatitis B vaccine series should be administered. Most patients with isolated HBcAb have resolved HBV infection with loss of HBsAb. Consider performing an HBV viral load test for confirmation. If the HBV viral load test is positive, the patient may be acutely infected (and will usually display other signs of acute hepatitis) or chronically infected. If the test is negative, the patient should be vaccinated. Refer to the HIVMA/IDSA's [Primary Care Guidance for Person with HIV](#) and the [Adult and Adolescent Opportunistic Infection Guideline](#) for detailed recommendations.

11. **Hepatitis C Screening (HCV antibody or, if indicated, HCV RNA)**<sup>i</sup> – At entry into care; every 12 months, for at-risk patients— injection drug users, person with a history of incarceration, men with HIV who have unprotected sex with men, and persons with percutaneous/parenteral exposure to blood in unregulated settings are at risk for hepatitis C (HCV) infection; or when clinically indicated. The HCV antibody test may not be adequate for screening in the setting of recent HCV infection (defined as acquisition within the past 6 months), or advanced immunodeficiency (CD4 count <100 cells/mm<sup>3</sup>). HCV RNA screening is indicated in persons who have been successfully treated for HCV or who spontaneously cleared prior infection. HCV antibody-negative patients with elevated ALT may need HCV RNA testing.
12. **Lipid Profile**<sup>i</sup> – Entry into care; 4-8 weeks after ART initiation or modification; consider 1-3 months after ART initiation or modification ; every 12 months if normal at baseline but with cardiovascular risk. If normal at baseline, every 5 years or if clinically indicated. If random lipids are abnormal, fasting lipids should be obtained. Consult the American College of Cardiology/American Heart Association's [2018 Guideline on the Management of Blood Cholesterol](#) for diagnosis and management of patients with dyslipidemia.
13. **Lung Cancer Screening**<sup>x</sup> – Annually with low-dose computer tomography (LDCT) for patients aged 50-80 and in fairly good health, and currently smoking or have quit in the past 15 years, and have at least a 20 pack-year smoking history (e.g. 1 pack a day x 20 years or 2 packs a day x 10 years).
14. **Mammogram (females)**<sup>vii</sup> – Starting at age 40, screening recommended annually. After age 55 every 2 years or can continue yearly screening. Screenings should continue as long as a woman is in good health and is expected to live at least 10 more years.
15. **Pregnancy test**<sup>i</sup> (For people of childbearing potential) – At entry into care; ART initiation or modification or when clinically indicated.
16. **Prostate-specific antigen (PSA) Screening**<sup>viii</sup> (males) – PSA testing is an individualized decision to be made by clinician and patient based on current guidelines.
17. **TB Testing**<sup>ii</sup> – Entry into care or anytime there is concern of a recent exposure. Annual TB test is recommended if patient is deemed high risk (repeated or ongoing exposure to known active TB, after incarceration, after living in congregate setting, active drug user or other risk

factor for TB). If tested when CD4 < 200, repeat after CD4 increases to above 200. Testing using either tuberculin skin test or interferon— $\gamma$  release assay.

- 18. Urinalysis<sup>i</sup>** – Entry into care; or if clinically indicate e.g., in patients with chronic kidney disease (CKD) or diabetes mellitus (DM). Consult the HIV Medicine Association of the Infectious Diseases Society of America’s (HIVMA/IDSA) [Clinical Practice Guidelines for the Management of Chronic Kidney Disease in Patients Infected with HIV](#) for recommendations on managing patients with renal disease. More frequent monitoring may be indicated for patients with evidence of kidney disease (e.g., proteinuria, decreased glomerular dysfunction) or increased risk of renal insufficiency (e.g., patients with diabetes, hypertension). Urine glucose and protein should be assessed before initiating tenofovir alafenamide (TAF)-or tenofovir disoproxil fumarate (TDF)-containing regimens and monitored during treatment with these regimens.

## HIV Specific

19. **ARV therapy is recommended and discussed**<sup>i</sup> – Risks and benefits are discussed including reduced morbidity and mortality and prevention of HIV transmission to others and if treatment initiated, follow-up with adherence. If refused, document in record and refer to ARTAS and or Department of Health Treatment Adherence Specialist.
20. **CD4 cell count**<sup>i</sup> – Entry into care; at ART initiation or modification; every 3-6 months during the first 2 years of ART, or if viremia develops while patient is on ART, or if CD4 count is <300 cells/mm<sup>3</sup>; every 12 months after 2 years on ART with consistently suppressed viral load, CD4 count 300-500 cells/mm<sup>3</sup>, if CD4 count >500 cells/mm<sup>3</sup>: CD4 monitoring is optional; if ART initiation is delayed monitor every 3-6 months; if treatment failure or if clinically indicated. *In accordance with the HRSA HAB performance measures, the local program defines consistently suppressed viral load as <200 copies/ml.*
21. **Genotypic Resistance Testing (PR/RT Genes)**<sup>i</sup> – Entry into care; at ART initiation or modification; if ART initiation is delayed; treatment failure or clinically indicated. Standard genotypic drug-resistance testing in ART-naïve persons should focus on testing for mutations in the PR and RT genes. If transmitted INSTI resistance is a concern, or if a person has a history of INSTI use in PrEP or treatment, or a person presents with viremia while on an INSTI, providers also should test for resistant mutation in the IN gene. In ART-naïve patient who do not immediately begin ART, repeat testing before initiating of ART is optional if drug-resistance testing was performed at entry into care. In patients with virologic suppression who are switching therapy because of toxicity or for convenience, viral amplification will not be possible; see the Drug-Resistance Testing section for a discussion of the potential limitations and benefits of proviral DNA assays in this situation. Results from prior drug-resistance testing should be considered because they can be helpful in constructing a new regimen.
22. **Genotypic Resistance Testing (Integrase Genes)**<sup>i</sup> – Entry into care, if transmitted INSTI resistance is suspected or if there is a history of cabotegravir long acting (CAB-LA) use for PrEP ; at ART initiation or modification, if transmitted INSTI resistance is suspected or if there is a history of INSTI use; treatment failure if there is a history of INSTI use; or clinically indicated, if there is a history of INSTI use. Standard genotypic drug-resistance testing in ART-naïve persons should focus on testing for mutations in the PR and RT genes. If transmitted INSTI resistance is a concern, or if a person has a history of INSTI use in PrEP or treatment, or a person presents with viremia while on an INSTI, providers also should test for resistant mutation in the IN gene. In ART-naïve patients who do not immediately begin ART, repeat testing before initiation of ART is option if drug-resistance testing was performed at entry into care. In patients with virologic suppression who are switching therapy because of toxicity or for convenience, viral amplification will not be possible; see the Drug-Resistance Testing section for a discussion of the potential limitations and benefits of proviral DNA assays in this situation. Results from prior drug-resistance testing should be considered because they can be helpful in constructing a new regimen.
23. **HIV viral load**<sup>i</sup> – Entry into Care; at ART initiation or modification; 4-8 weeks after ART initiation or modification if HIV RNA is still detectable, repeat testing every 4-8 weeks until viral load is suppressed to <50 copies/mL. Thereafter, repeat testing every 3-6 months. For

patients on ART, viral load typically is measured every 3-6 months. More frequent monitoring may be considered in individuals having difficulties with ART adherence or at risk for nonadherence. However, for adherent patients with consistently suppressed viral load and stable immunologic status for more than 1 years, monitoring can be extended to 6-month intervals; if ART initiation is delayed, repeat testing is optional; or if treatment failure or if clinically indicated.

24. **HLA-B\*5701<sup>i</sup>** – At ART initiation or modification if considering start of abacavir (ABC) and document in record carrying data forward to most current volume. *(Currently not paid for by the Ryan White Program due to payer of last resort restrictions; must access ViiV sponsored testing directly through labs. For LabCorp, HLA-AWARE HLA-B\*5701 ViiV code #006940 and for Quest Diagnostic ViiV HLA-B\*B5701 test code #19774).*
25. **Treatment of opportunistic infections and prophylaxis for opportunistic infections<sup>ii</sup>** – Specifically, but not limited to, Mycobacterium avium complex (MAC), Pneumocystis jirovecii pneumonia (PCP), and Toxoplasmosis (Toxo) prophylaxis per DHHS Guidelines.
26. **Tropism testing<sup>i</sup>** – At ART initiation or modification if considering use of CCR5 antagonist; or for treatment failure if considering a CCR5 antagonist, or if the patients with virologic failure on a CCR5 antagonist; or if clinically indicated. If performed, record carried forward to most current volume.

### **Immunizations**

*Document in medical record carrying data forward to most current volume*

27. **COVID-19 vaccination<sup>ix</sup>** – Vaccinate per CDC guidance.
28. **Hepatitis A vaccination<sup>ix</sup>** – Offer vaccination if not immune per guidance. Assess for response 30-60 days after vaccination by performing Hep A IgG antibody or Hep A Total antibody.
29. **Hepatitis B vaccination<sup>ix</sup>** – Offer vaccination if not immune per guidance. Assess for response 30-60 days after vaccination by performing Hepatitis B surface antibody quantitative (anti-HBs).
30. **Human Papillomavirus (HPV) Vaccine<sup>ix</sup>** – HPV vaccination as indicate by current guidelines.
31. **Influenza vaccination<sup>ix</sup>** – Offer IIV4 or RIV4 annually.
32. **Meningococcal vaccination<sup>ix</sup>** – Use 2-dose series MenACWY (Menveo or MenQuadfi) at least 8 weeks apart and revaccinate every 5 years if risk remains. See vaccination guidelines.
33. **Mpox vaccination** – Vaccinate per CDC guidance. See <https://www.cdc.gov/poxvirus/monkeypox/vaccines/vaccine-basics.html>

34. **Pneumococcal vaccination** –Vaccinate per guidelines. For guidance on which pneumococcal vaccine should be used to: [www.cdc.gov/vaccines/vpd/pneumo/hcp/pneumoapp.html](http://www.cdc.gov/vaccines/vpd/pneumo/hcp/pneumoapp.html).
35. **Tetanus, diphtheria, pertussis (Td/Tdap)** <sup>ix</sup>– One dose Tdap, then Td or Tdap booster every 10 years.
36. **Varicella** <sup>ix</sup>– Vaccination may be considered (2 doses 3 months apart); VAR contraindicated for HIV infection with CD4 percentage <15% or CD 4 count <200 cells/mm<sup>3</sup>.
37. **Zoster vaccination** <sup>ix</sup> — Use 2-dose series recombinant zoster vaccine (RZV, Shingrix) 2-6 months apart (minimum interval: 4 weeks; repeat dose if administered too soon). See vaccination guidelines for detailed information and considerations.

### STI Screenings

38. **Anal Dysplasia Screening** <sup>iii</sup>– For all patients with HIV  $\geq$ 35 years old, see information at <https://www.hivguidelines.org/guideline/hiv-anal-cancer/?mycollection=hpv-care>
39. **Bacterial STIs (Syphilis, *N. gonorrhoeae* (GC), *C. trachomatis* (Chlamydia) and parasitic STIs (Trichomoniasis)** <sup>ii</sup>– At the initial HIV care visit, providers should test all sexually active persons with HIV infection for curable STDs (e.g., syphilis, gonorrhea, and chlamydia) and perform testing at least annually during the course of HIV care. See information at <https://www.cdc.gov/std/treatment-guidelines/screening-recommendations.htm>
