Proportion of new HIV diagnoses among Hispanic adults by risk category in Miami-Dade County, 2022

HIV Care Continuum for Hispanics living with diagnosed HIV infection in Miami-Dade County in 2022

The HIV Care Continuum reflects the series of steps a person living with HIV (PLWH) from initial diagnosis to being retained in care and achieving a very low level of viral load in the blood (viral suppression). The risk of HIV transmission is greatly reduced when people have an undetectable viral load.

HIV Screening

All adolescents and adults (ages 13-64) should be tested for HIV at least once during their lifetime. Persons at risk for HIV should be tested **annually**.

Per Florida Law, all pregnant women are to be tested for HIV and other STDs at initial prenatal care visit, and again at 28-32 weeks and at labor and delivery, if status is unknown.

Pre-Exposure Prophylaxis [PrEP]

For persons at increased risk for HIV, a pill (Truvada®) once daily, can reduce the risk of acquiring HIV by over **90%**. Condoms are still recommended during sex to prevent other STDs, which can increase the risk of HIV. STDs are on the rise in Florida.

Antiretroviral Therapy [ART]

For persons newly diagnosed with HIV, starting ART with a provider immediately after diagnosis improves health outcomes by preventing disease progression and reducing viral load. To find a care provider or to learn more about resources available to persons living with HIV in Miami-Dade visit:
